Array Ex - Typing Speed Averager

Using the starter solution provided, create an application that calculates a running average of numbers

- Use an int array capacity of 5
- Calculate the current average of all numbers within the array
- Display the running average in a label
- Add each test into a ListBox
- Display a message when the user attempts to add a sixth entry. Do not allow the value to be assigned within the array
- Add a clear button to clear all user inputs from textbox, labels and listbox.
- See the attached video demo
